## Envy Magazine Chooses Oxygenics On The Quest To Make The Perfect Green Bath And Spa At Home

Making our homes more eco-friendly doesn't have to be a daunting or difficult task. There are little things that can be done to make areas of our homes more enjoyable, relaxing and 'green' all at the same time. The writers and staff at Envy Magazine found a few 'envious' products that can turn a bathroom into an eco-friendly spa without breaking the bank or compromising style.

It's no surprise that Oxygenics showerheads were the top choice for their favorite green showering solution. Installing any of our Oxygenics showerheads is an easy, quick way to save water and energy without sacrificing a satisfying shower. The patented technology uses less water while pressurizing and infusing the water you are using with oxygen, so you won't even know you're saving water! It's the best of both worlds.

CREATE A GREEN BATH & SPA AT HOME

REST IN GREEN

You don't have to be a complete granola to go green. Not everyone can pull off the hairy armpits, shower once a week and re-use toilet paper kind of lifestyle. But for those who still have a soft spot for the planet but just don't know how to show it, you can simply start from home—especially in your restroom, the place where you spend hours conducting morning routines and the last place for nightly rituals.

With these eco-friendly design ideas—which are equally as stylish and affordable—you'll turn your blasé bath into a Zen-like sanctuary fit enough for Al Gore. —FA

**BURN FAT, NOT MONEY**  
Infrared Sauna

Errbody and their mama has a whirlpool, and maybe a steam shower or sauna. But how many peeps have an infrared sauna? The latest in sauna technology, it heats you directly using Far Infrared light Radiance (FIR) in which 93 percent of the heat penetrates below the skin. Thus, it minimizes the heat released to surrounding air which allows you to breathe easier, feel less claustrophobic, and cuts back on your energy bill. Depending on the number of people you want it to hold—one, two or four—you'll find one perfect for your restroom's size and, um, lifestyle.

**SINK INTO THIS**  
Waterfall Bathroom Furniture

Waterfall Bathroom Furniture produces their line with the highest-rated environmental MDF made without formaldehyde, and they use the lowest water-based voc paint available. Their optional countertops are made of Caesar stone, the first quartz surface company to carry the ISO 14001 environmental standard. Dunno what that means, but it sounds serious.

**GET STONED**  
Sea Stone Wall Hook

Bring home the beach with these towel/coat hangers made of polished stones picked from the shores of New Hampshire. Each stone gets its uniquely round shape from years of being smoothed by tumbling waves. And for each stone "harvested," another rough quarry stone is "planted" in its place. The same goes for the trees used in the wooden backplates. Ten times the number of trees are planted to conserve the forests. Available with a dark hardwood or light hardwood base.

**THANK HEAVEN FOR HEMP**  
Organic Hemp Shower Curtain

Replace your dingy plastic shower curtain with a beautifully crafted 100 percent hemp shower curtain. Hemp is easily grown without chemicals and pesticides, and the organic shower curtains are metal-free, unbleached and undyed—except new color choices, which are pigmented with biodegradable dyes or hydrogen peroxide. While you're at it, order some hemp towels, bath and yoga mats, bed sheets and draperies. The 100 percent hemp linen fabric is naturally resistant to destructive UV rays, insulates well—saving you money on home heating—and lasts three times longer than cotton fiber.

**LET IT FLOW**  
Oxygenics Spa Showerhead

This low-flow showerhead injects oxygen into the water to increase pressure, using a mere 2.5 gallons of water per minute—in comparison to a standard shower's rate of 4.5. In the end, you'll save over 20,000 gallons of water per year and almost \$150 on your utility bill annually. Extra benefits—as if there weren't enough already: the strong, oxygenated mist improves circulation and stimulates cell activity.

**ON THE ROCKS**  
BlazeStone Recycled Tile

Convert your dull shower wall, bathroom floor or countertop with recycled tiles. BlazeStone tiles are crafted entirely from post-industrial and post-consumer glass, with no additional oxides or colorants. Each tile is handmade from unique combinations of glass that give each tile a distinctive appearance and subtle color variation.
